

E-Commerce and Online Storefronts

LIHQ has been successfully implementing e-commerce and online shopping systems on the internet for many years. We have customized the shopping experience as well as back--end integration of *many* different shopping cart applications.

One of our favorite tools used is **Cart32**.

Cart32 provides us a feature rich shopping cart on which to build your shop. It has many of the features you would want in a web based retail store front already built in, reducing the need for extensive custom programming. Your site design along with Cart32 integration will make your online shop a good looking and friendly shopping experience.

Cart32 5.x
